Input Data can be stored in either of the three ways:-

1. Storing through vector
2. Storing with file
3. Storing with database

#### A. When Storing Input Data through Vectors:-

1. java.util.Vector is used to implement the vector class
2. You define a class and within it also define vector and also an object of another class using the names of your choice. I.e. mine is “**Person**”
3. Now the **Person object** is made to store basic input data as desired by the user. And we use vector to store this information in easy manner
4. We define a loop and call the start method as many times as earlier defined passing new input data to start method each time as an argument. Another Method Called “**start**”
5. In **start** method we are setting information on **person** object and storing this information in vector a using the **add** method of vector. Another Method Called “**add**”
6. Since the loop run as many times as defined, so the vector will record such input records as defined and save them which you may use for future purpose.
7. We can use the **show** method to show all the data inside the vector.
8. In **show** method we run a loop from 0 to vector size so that each element in vector gets processed. In next step we display the information.
9. After that we defined a **class** called **Person** which will define the variable info within it. We have defined setters and getters for these.

#### Advantages of Using Vectors to Store Data:

1. One Can Update the Existing Data Easily.
2. Data can be Manipulated Easily.

### DisAdvantages of Using Vectors to Store Data:

1. Stored data are lost once the session is terminated and hence the data are stored temporary.
2. No future reference for the Input Data.
3. In case of an error, it's not easy to correct since after every execution the data is lost.

### B. When Storing Input Data Using Text Files:-

1. Include **FileWriter** and **BufferedWriter** to include functionality to **write to file**.
2. Make a class and name it. I.E. **StorageFile**
3. Make an object of **class Person** which contain info about person.
4. Define the main method and define the object of StorageFile class.
5. Call the start method of this class which will write data to file.
6. Define the start object and then make objects for File Writer and BufferedWriter.  
Now they are used to write the information using the msg function of Class Person.
7. After writing to file close the stream. Remember in FileWriter give it 2 arguments which are file path and the other argument that is true tell that we want to append in the file
8. Capture all exception which may occur
9. Define the Person class which define the data given. Also define setter and getter for the same. Also define a msg function which will return the input data for current object

### Advantages of Using Text File to Store Data:

1. Input Data can be permanently stored.
2. Manipulation of input in future is very easy.
3. In case of any error, it's very easy to correct since stored data remains even after end of execution and even termination of the program.
4. Future reference of the stored input data is very possible.

## DisAdvantages of Using Text File to Store Data:

1. Update of stored data directly from the text file is relatively difficult.

## Advantages of Using Database to Store Data:

- i. Input Data can be permanently stored.
- ii. Manipulation of input in future is very easy.
- iii. In case of any error, it's very easy to correct since stored data remains even after end of execution and even termination of the program.
- iv. Future reference of the stored input data is very possible.
- v. Update of existing data is very easy.

## Advantages of Using Database to Store Data:

- i. It require more technical skills than the other two methods.
- ii. It requires extra configurations and other application software to work efficiently.
- iii. It's relatively expensive to implement since some may require internet connection.

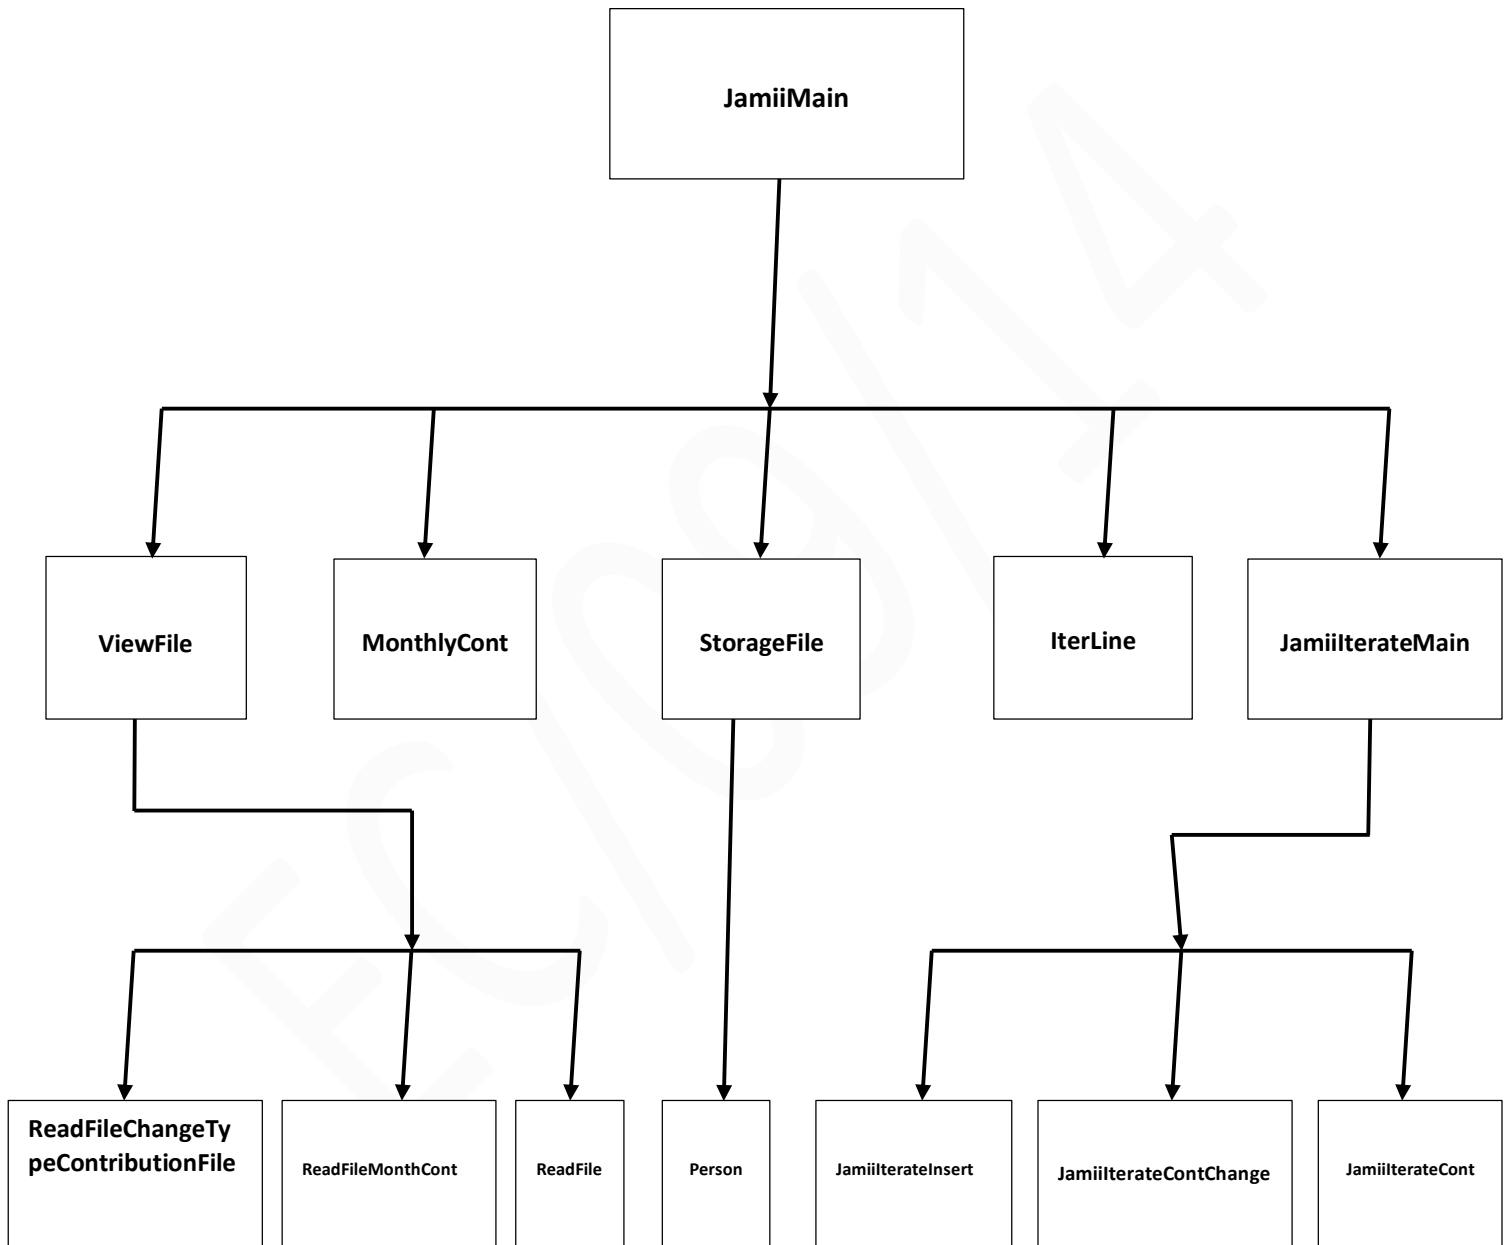

## Assumptions

1. The automatic **UPDATE** of the existing input data in the text file is relatively hard compared to the use of Database.
2. **REMOVE** of a specific members is also very hard. One should be knowing the line in which the member exists in the Text file in order to be able to delete.
3. Smooth **ITERATION** is also relatively hard with Text File compared with use of vector/Array and database.
4. List of Monthly Contributions of the Members cannot be updated automatically hence it's not easy to sum contributions of a specific member directly.
5. When a member changes the Membership, it cannot be updated directly hence the names will end up being left in two lists.
6. In case of a wrong data entry, one needs to access the Text file to remove it manually.

## Design of the Jamii Chama Software

The Software has a total of 13 classes with one Main class (JamiiMain.Java) which is executable. The Skeleton Structure below represents the Jamii Chama Software.

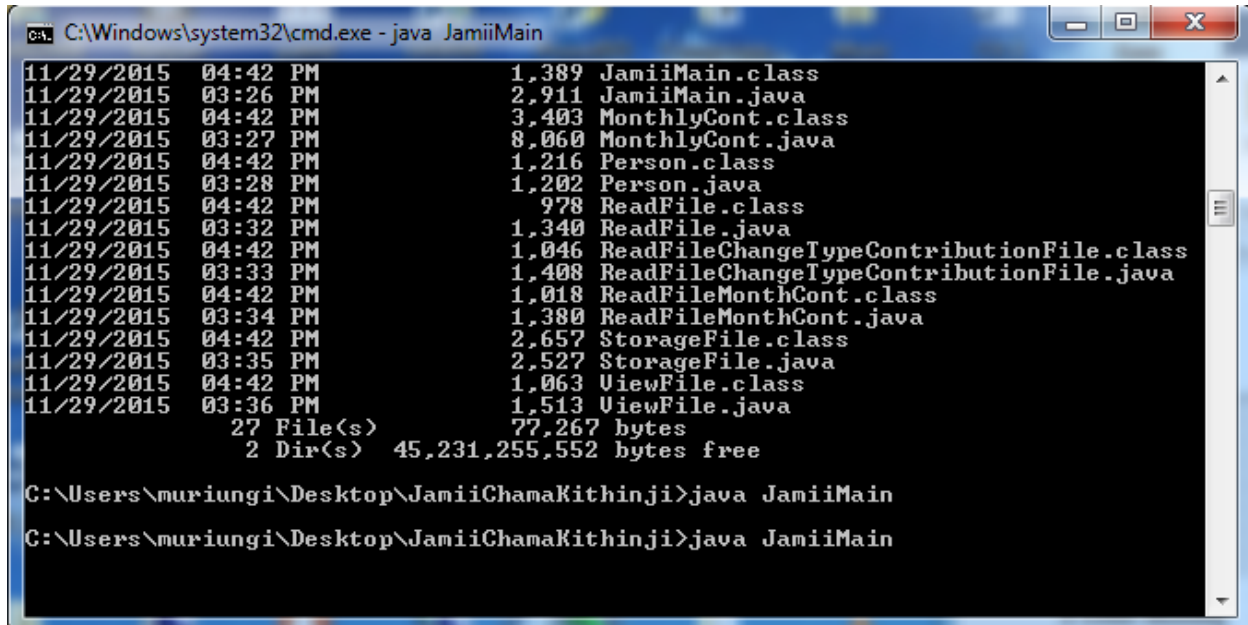

The Rectangular boxes represents the Classes. JamiiMain is the main class.

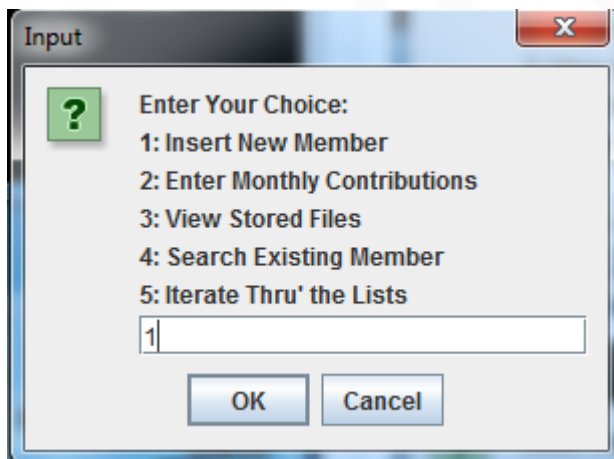

## WORKING OF THE JAMII CHAMA SOFTWARE

### *1. INSERTING NEW MEMBER*

```
C:\Windows\system32\cmd.exe - java JamiiMain
11/29/2015 04:42 PM      1,389 JamiiMain.class
11/29/2015 03:26 PM      2,911 JamiiMain.java
11/29/2015 04:42 PM      3,403 MonthlyCont.class
11/29/2015 03:27 PM      8,060 MonthlyCont.java
11/29/2015 04:42 PM      1,216 Person.class
11/29/2015 03:28 PM      1,202 Person.java
11/29/2015 04:42 PM        978 ReadFile.class
11/29/2015 03:32 PM      1,340 ReadFile.java
11/29/2015 04:42 PM      1,046 ReadFileChangeTypeContributionFile.class
11/29/2015 03:33 PM      1,408 ReadFileChangeTypeContributionFile.java
11/29/2015 04:42 PM      1,018 ReadFileMonthCont.class
11/29/2015 03:34 PM      1,380 ReadFileMonthCont.java
11/29/2015 04:42 PM      2,657 StorageFile.class
11/29/2015 03:35 PM      2,527 StorageFile.java
11/29/2015 04:42 PM      1,063 ViewFile.class
11/29/2015 03:36 PM      1,513 ViewFile.java
      27 File(s)      77,267 bytes
      2 Dir(s)  45,231,255,552 bytes free

C:\Users\muriungi\Desktop\JamiiChamaKithinji>java JamiiMain
C:\Users\muriungi\Desktop\JamiiChamaKithinji>java JamiiMain
```

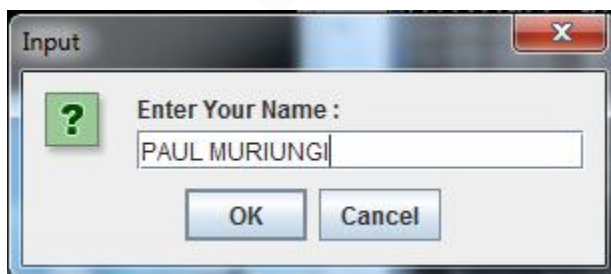

Input

Enter Your Choice:

- 1: Insert New Member
- 2: Enter Monthly Contributions
- 3: View Stored Files
- 4: Search Existing Member
- 5: Iterate Thru' the Lists

1

OK Cancel

Input

Enter Your Name :

PAUL MURIUNGI

OK Cancel

Input

Enter Your ID No. :

OK Cancel

Input

Enter Amount for Type of Your Membership:

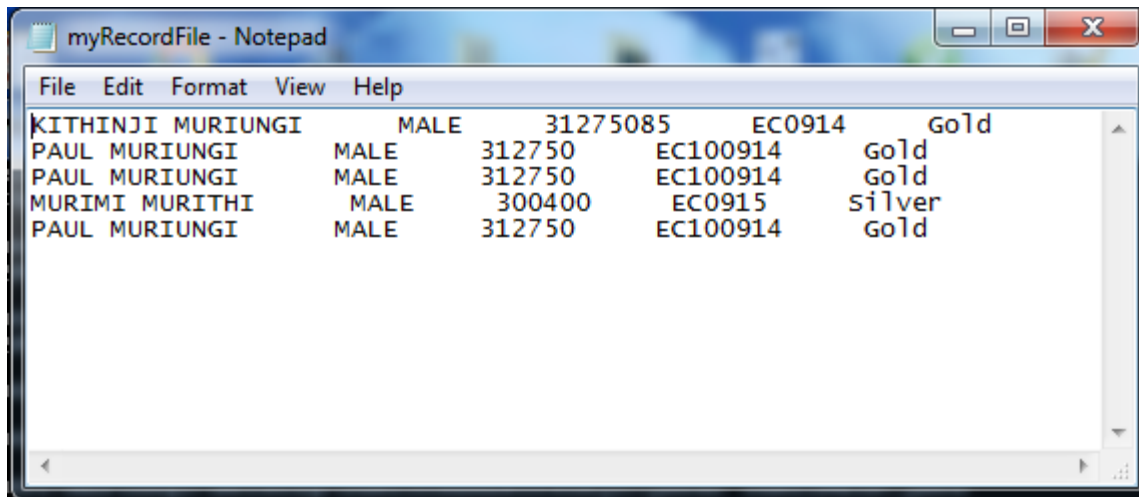

3000

OK Cancel

Message

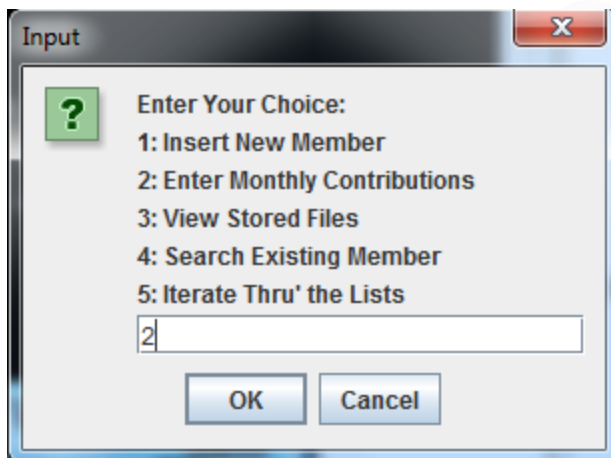

THANK YOU  
FOR REGISTERING WITH  
JAMII CHAMA.

OK

KITHINJI MURIUNGI	MALE	31275085	EC0914	Gold
PAUL MURIUNGI	MALE	312750	EC100914	Gold
PAUL MURIUNGI	MALE	312750	EC100914	Gold
MURIMI MURITHI	MALE	300400	EC0915	Silver
PAUL MURIUNGI	MALE	312750	EC100914	Gold

## 2. INPUTING MONTHLY CONTRIBUTIONS

**Input**

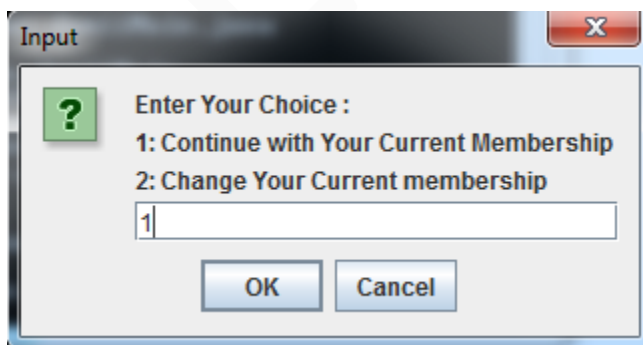

Enter Your Choice:

- 1: Insert New Member
- 2: Enter Monthly Contributions
- 3: View Stored Files
- 4: Search Existing Member
- 5: Iterate Thru' the Lists

2

OK Cancel

- i. Continue With the Current Membership

**Input**

Enter Your Choice :

- 1: Continue with Your Current Membership
- 2: Change Your Current membership

1

OK Cancel

Input

Enter Your Name :

UHURU KENYATTA

OK Cancel

Input

Enter Your ID No. :

300500

OK Cancel

Input

Enter Your Account Number :

EC0916

OK Cancel

Input

Choose Your Type of Account:

1. Gold
2. Silver
3. Bronze

3

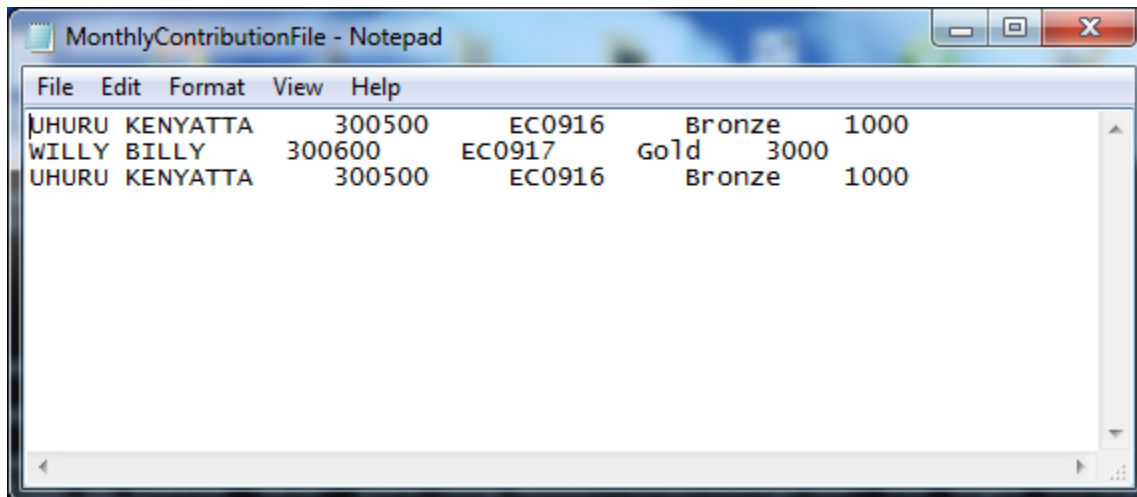

OK Cancel

Message

THANK YOU

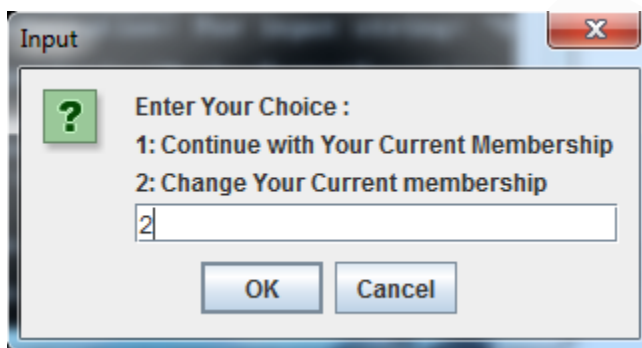

FOR UPDATING YOUR MONTHLY CONTRIBUTION

OK

UHURU KENYATTA	300500	EC0916	Bronze	1000
WILLY BILLY	300600	EC0917	Gold	3000
UHURU KENYATTA	300500	EC0916	Bronze	1000

ii. Changing Current Membership

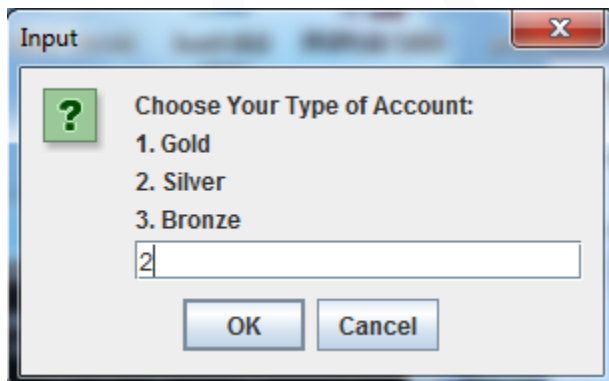

**Input**

**Enter Your Choice :**

- 1: Continue with Your Current Membership
- 2: Change Your Current membership

2

OK Cancel

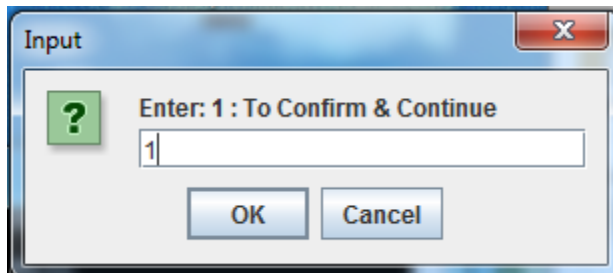

**Input**

**Choose Your Type of Account:**

- 1. Gold
- 2. Silver
- 3. Bronze

2

OK Cancel

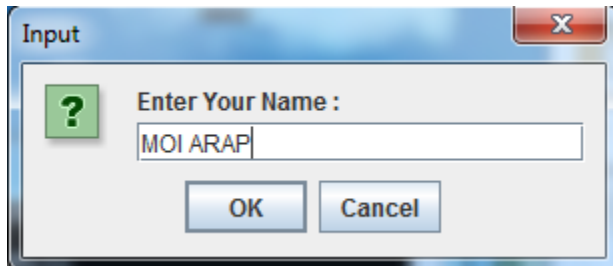

Input

Enter: 1 : To Confirm & Continue

1

OK Cancel

This is an 'Input' dialog box with a green question mark icon. It prompts the user to 'Enter: 1 : To Confirm & Continue'. The text '1' is entered in the input field. There are 'OK' and 'Cancel' buttons at the bottom.

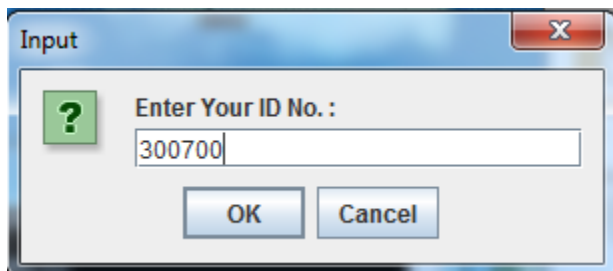

Input

Enter Your Name :

MOI ARAP

OK Cancel

This is an 'Input' dialog box with a green question mark icon. It prompts the user to 'Enter Your Name :'. The text 'MOI ARAP' is entered in the input field. There are 'OK' and 'Cancel' buttons at the bottom.

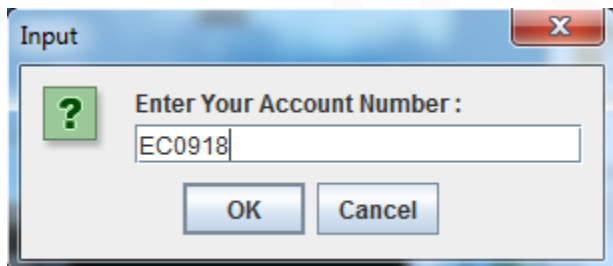

Input

Enter Your ID No. :

300700

OK Cancel

This is an 'Input' dialog box with a green question mark icon. It prompts the user to 'Enter Your ID No. :'. The text '300700' is entered in the input field. There are 'OK' and 'Cancel' buttons at the bottom.

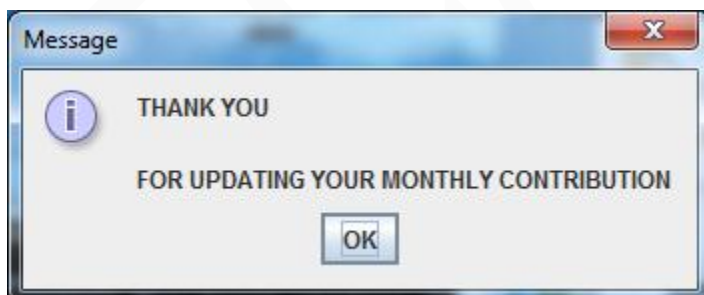

Input

Enter Your Account Number :

EC0918

OK Cancel

This is an 'Input' dialog box with a green question mark icon. It prompts the user to 'Enter Your Account Number :'. The text 'EC0918' is entered in the input field. There are 'OK' and 'Cancel' buttons at the bottom.

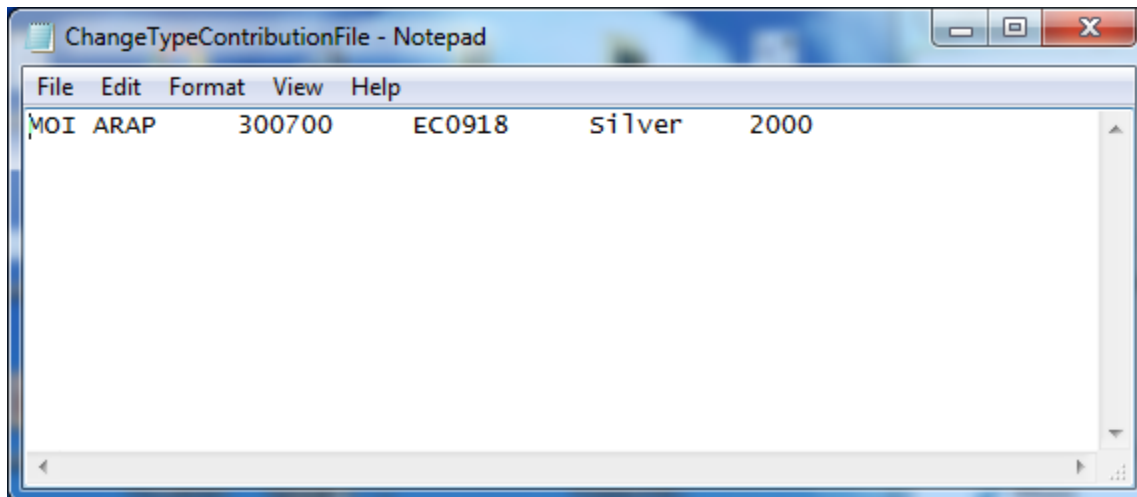

Message

THANK YOU

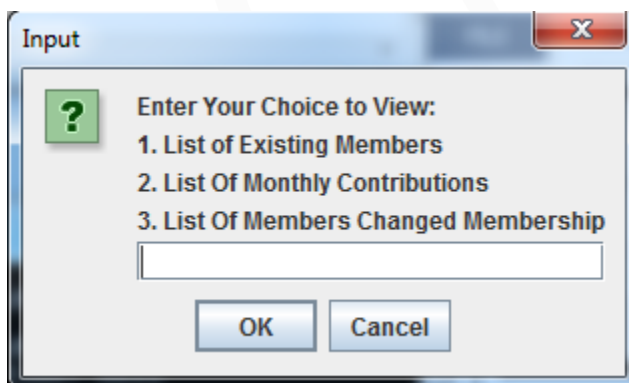

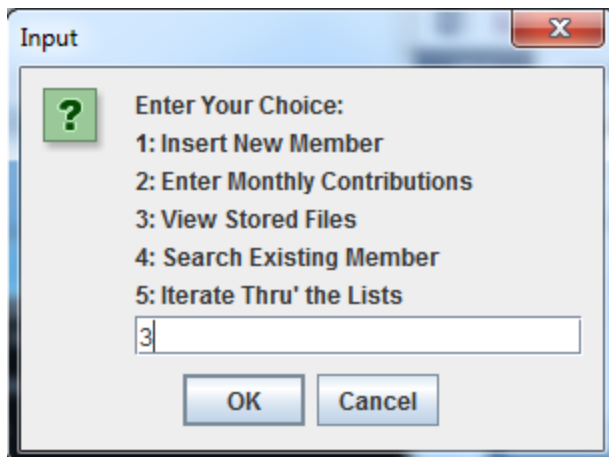

FOR UPDATING YOUR MONTHLY CONTRIBUTION

OK

This is a 'Message' dialog box with a purple information icon. It displays the text 'THANK YOU' and 'FOR UPDATING YOUR MONTHLY CONTRIBUTION'. There is an 'OK' button at the bottom.

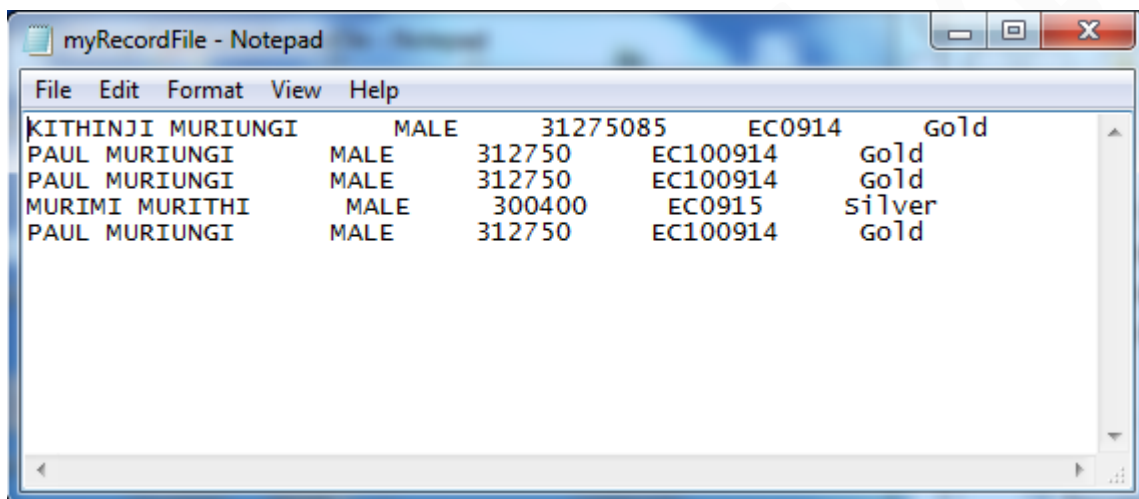

### 3. VIEW STORED FILES

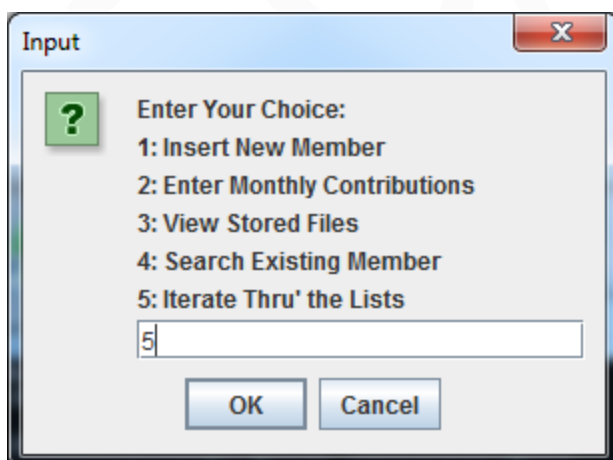

```
C:\Users\muriungi\Desktop\JamiiChamaKithinji>javac JamiiMain.java

```

## Comparison

## 4. Iterating Through the List Of Members

Input

Enter Your Choice:

- 1: To Iterate Thru' Existing Members' list
- 2: To Iterate Thru' Monthly Contributions List
- 3: To iterate Thru' list of Contribution of members who have changed membership

1

OK Cancel

Input

Enter Account Number to delete:

300400

OK Cancel

```
C:\Users\muriungi\Desktop\JamiiChamaKithinji>java JamiiMain
MURIMI MURITHI    MALE    300400    EC0915    Silver
C:\Users\muriungi\Desktop\JamiiChamaKithinji>
```

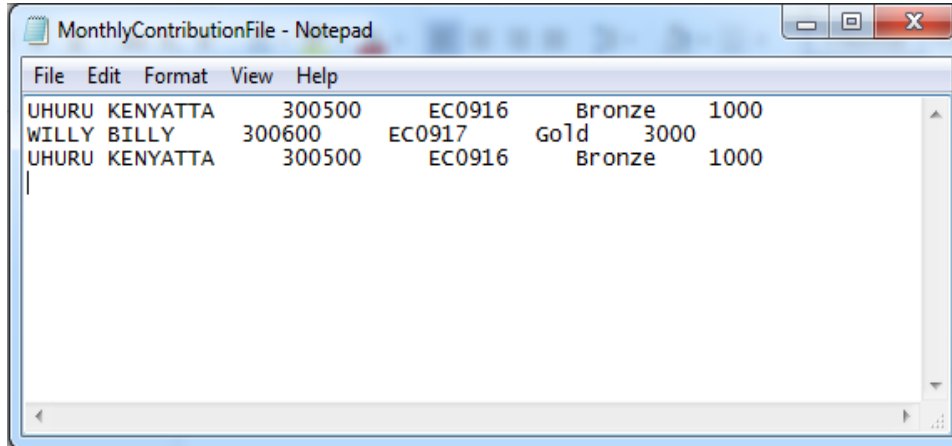

## Comparison

myRecordFile - Notepad

KITHINJI MURIUNGI	MALE	31275085	EC0914	Gold
PAUL MURIUNGI	MALE	312750	EC100914	Gold
PAUL MURIUNGI	MALE	312750	EC100914	Gold
MURIMI MURITHI	MALE	300400	EC0915	silver
PAUL MURIUNGI	MALE	312750	EC100914	Gold

## 5. DELETING AN EXISTING MEMBER FROM A TEXT FILE

- i. Go To the File Where The Existing Member Who Is To Be Deleted Is

- ii. Select the Details Of The Member

- iii. Enter <Delete> To Delete

## JAMII CHAMA SOFTWARE CODES IN JAVA

### JamiiMain.java
